

當你站在一整個世界

Standing Before an Entire World

跟著極地科研的腳步

Following the Footsteps of Polar Science

一片無垠的雪白世界，實際上南北兩端的極區，藏著截然不同的環境特性與科學線索。

科學家們在這樣極寒且孤立的環境下，持續投入心力，試圖以精準的觀測與研究，探索這未知的國度，從這些極端環境中理解地球運作的機制。

這場關鍵的科學挑戰，台灣當然也不會缺席。

來成為這場極地科學探索的一份子吧！

At first glance, the polar regions may seem like one boundless world of white. In fact, the Arctic and Antarctic hold very different environmental features and scientific clues.

In these extremely cold and isolated places, scientists continue to devote themselves to careful observation and research. By exploring these unknown realms, they seek to understand the mechanisms of Earth's operation.
